

LedgerGuard

OpenAPI overview for Circle Agent Marketplace review

A non-custodial Arc Testnet transaction preflight and settlement-evidence API for AI agents. LedgerGuard never requests seed phrases, private keys, or custody of funds. Signing remains client-side.

Production URL	https://ledgerguard-gules.vercel.app
OpenAPI 3.1	https://ledgerguard-gules.vercel.app/openapi.json
Service catalog	https://ledgerguard-gules.vercel.app/.well-known/ledgerguard.json
Network	Arc Testnet CAIP-2 eip155:5042002
Mainnet state	Disabled - explicit release review required

Public endpoints

Method	Path	Purpose
POST	/v1/preflight	Decode intent, enforce policy, and simulate when a sender is supplied.
POST	/v1/evidence	Reconcile a finalized transaction with the declared transfer or approval intent.
GET	/v1/paid/network-risk	x402 v2 paid Arc network-risk snapshot; testnet price 0.001 USDC.
GET	/v1/networks	Network registry and release status.
GET	/ready	Arc Testnet RPC chain-ID and readiness verification.

Decision contract

ALLOW means all configured checks passed. **REVIEW** means a human or caller must resolve a warning, including a skipped simulation. **BLOCK** means the caller must not sign or broadcast.

Example request

```
{
  "network": "arcTestnet",
  "to": "0x3600000000000000000000000000000000000000000000000000000000000000",
  "data": "0x...",
  "valueWei": "0",
  "intent": {
    "action": "transfer",
    "expectedRecipient": "0x...",
    "expectedAssetAddress": "0x3600...0000",
    "expectedAmountMicroUsdc": "1000000",
    "purpose": "Agent API purchase"
  },
  "policy": {"requireSimulation": true, "maxAmountMicroUsdc": "1000000"}
}
```

Security and settlement model

The API is designed as a verification layer, not a wallet. It returns evidence and policy decisions; it does not hold funds, create signatures, or broadcast transactions for users.

Control	Current behavior
Custody	None. No private keys, seed phrases, or wallet credentials.
Signing	Client-side only. Preflight accepts unsigned calldata.
Simulation	Missing or failed required simulation fails closed.
Asset	Arc Testnet USDC is checked against the configured official address.
Approvals	Unlimited approvals are blocked by default; approval evidence is parsed separately.
Evidence	Receipt, chain, status, transfer/approval event, recipient, asset, and amount are reconciled.
Mainnet	Disabled until official parameters, code fingerprint, human approval, and canary checks.
HTTP	Strict CSP, explicit CORS, no-store API responses, sanitized external errors.

x402 testnet resource

GET /v1/paid/network-risk returns HTTP 402 and a PAYMENT-REQUIRED header until a valid x402 v2 payment signature is settled by Circle Gateway. The current testnet price is 1,000 micro-USDC (0.001 USDC).
